CANADY MITCHEM

Phone: 816-724-9751 | Email: Csmhgc@umsystem.edu | Website: canadymitchem.com | LinkedIn: linkedin.com/in/c-mitchem

SKILLS

Languages: C, C#, Python, Java, HTML, CSS.

Platforms: Visual Studio Code, Visual Studio, Git, Unity, React Native.

ACADEMICS

University of Missouri | Columbia, Missouri | Bachelor of Science in Computer Science *Expected Graduation: May 2028*

WORK EXPERIENCE

Software Engineer Intern – WellSky *May 2026 – August 2026*

C#, .NET, Angular, TypeScript, PostgreSQL

- Built full-stack features and bug fixes for WellSky's Referral Manager healthcare platform across an Angular/TypeScript frontend and a .NET/C# backend, shipping roughly 60 merged pull requests over the summer.
- Delivered the majority of defect fixes needed to launch a seven-report Angular analytics suite to general availability, correcting metric logic (conversion-funnel monotonicity, double timezone conversions, coalesced response-time) and adding empty-state UX, CSV export, and server-side sorting and pagination.
- Built the backend service's first in-process integration test harness in xUnit, covering the UI-to-API-to-database path and the bulk-import endpoint where only unit tests had existed.

Software Developer Intern – tonetta.ai *March 2026 – July 2026*

Python, Electron, NumPy, Supabase, FastAPI

- Developed a cross-platform desktop application that captures live microphone audio and applies real-time DSP (Digital Signal Processing) to enhance vocal performance for sales professionals.
- Built a real-time pitch stabilization system using autocorrelation-based F0 detection and linear interpolation resampling to gently correct stress-induced pitch drift without altering voice identity.
- Designed a bidirectional adaptive EQ that measures live spectral balance and applies proportional IIR filter corrections toward a calibrated voice reference.
- Engineered an Electron-to-Python IPC bridge for real-time audio parameter control.

Undergraduate Research *August 2025 – Present*

C#, Unity, VR

- Designed and developed an educational VR game in Unity (C#) to teach fundamental cybersecurity concepts to neurodivergent and autistic children, focusing on accessibility and engagement.
- Implemented interactive mechanics, user-friendly interfaces, and adaptive feedback systems to accommodate diverse learning needs.
- Conducted iterative testing and design improvements to enhance usability and learning outcomes, blending game design, human-computer interaction, and cybersecurity education.
- Collaborated with faculty and peers on research goals, contributing to ongoing studies on the effectiveness of VR in inclusive education.

Peer Learning Assistant (PLA) *January 2026 – Present*

INFOTC 3630: Intro to Virtual Reality (Jan 2026–May 2026) | CMP_SC 2050: Algorithm Design & Programming II (Aug 2026–Present)

- Supporting instruction and hands-on lab work for two undergraduate CS courses: Intro to Virtual Reality (INFOTC 3630) and Algorithm Design and Programming II (CMP_SC 2050).
- Assisting students with VR fundamentals, consumer-grade hardware, and immersive experience design, as well as core data structures (stacks, queues, linked lists, trees) and efficient sorting/searching methods.
- Providing technical guidance during labs and office hours, reinforcing concepts including recursion, data abstraction, and Big-O analysis.

RELEVANT PROJECTS

Guessify – JavaScript, React, Node.js, Express, MongoDB *guessify.live*

- Built Guessify, a full-stack MERN music guessing game where players guess songs from short audio previews, with longer clips revealed after each wrong guess and more points awarded for faster answers.
- Implemented genre-based games, a shared daily challenge, and custom playlists with public / friends-only / private visibility, alongside a social layer of friends, leaderboards, and friend-to-friend challenges.
- Built player profiles with stats, streaks, and recent game history, and implemented local email/password auth with security-question reset alongside Google OAuth; deployed live on Railway with a custom domain.

PROFESSIONAL EXTRACURRICULAR

Missouri University Virtual Reality (MUVR) | Co-President *April 2025 – Present*

- Planned and organized events, game nights, meetings, workshops, and travel to hackathons (MIT and Stanford).
- Tripled the number of events and workshops hosted compared to previous years.

Co-Director, Tigerverse XR Hackathon *Present*

- 2x increase in hacker participation through strategic outreach and event promotion.
- Secured first-ever corporate sponsorships and prize support from industry partners.
- Coordinated organizers, volunteers, judges, and sponsors to deliver a successful event.
